EMAIL stevecowden@sterling.net

Steve has been a visual storyteller for over twenty years. His informational graphics, maps, diagrams, charts and illustrations have won national and international awards. In 2008, Steve was runner-up for a Pulitzer prize for explanatory journalism for a series of graphics he created for The Oregonian newspaper which explained the workings of Intel's newest chip design.

Steve enjoys taking on challenging projects that require creative thinking and unique visuals. His artwork can be seen at Oregon Zoo's Stellar Cove where a permanent display explains how the water filtration system works. He recently designed and illustrated a book for Solarworld that explains how solar cells are manufactured. His graphics are used at Intel to educate new employees on the process of chip production.

He worked at The Oregonian from 1990 to 2010. He currently works for The Port of Portland as a multimedia artist in their corporate marketing department.
